25X1

1. Some uranium deposits have been discovered and are being exploited at Baia Mare. Nearby, approximately eight kilometers, are the Baia Sprie mines. About 20 kilometers east of Baia Sprie there is another mining center, Jereapan (sic). This zone is known for its richness in minerals, including lead, zinc, copper and silver and is now under exploitation for uranium.
2. The Baia Sprie mines extend over an area of 155 hectares. The Jereapan mines, together with the Cavnicu mines, occupy 356 hectares, but prospecting for uranium in the Jereapan area covers an area of 800 to 1,000 hectares. The entire area is guarded by the Militia.
3. Baia Mare is connected by rail with Satu Mare. Baia Sprie and Jereapan are interconnected by a road which runs to Baia Mare.
